JavaScript/TypeScript
- **Back-End Development**
Spring Boot, FastAPI, Express.js
- **Database Management**
MySQL, PostgreSQL, SQL Server

LANGUAGES

- **Khmer** (Native)
- **English**

WORK EXPERIENCE

Young Credit Bureau Batch 2 Program

Credit Bureau Cambodia (CBC)

At CBC, I was involved in many impactful projects that improved user experience and operational efficiency. My role requires full development expertise. Working with cross-functional teams and application of best practices in software development. Key projects include:

- **PE Agent Platform:** Contributed to migrating the platform that enables CBC's members to allow consumers to request Personal Credit Reports at their branches. Transitioned to a new tech stack using Nuxt JS for the front end and Spring Boot for the back end.
- **CBC Cross Border Platform:** Developed a platform allowing Cambodian citizens living or working in South Korea to request their Credit Reports. Focused on creating a seamless user experience and ensuring secure data sharing between the two countries.
- **CBC Mini App:** Contributed to front-end development for a platform integrated into the AMK Mobile App, enabling users to request their Credit Reports directly within the app. Utilized Nuxt JS, gaining expertise in building responsive and efficient interfaces seamlessly integrated with the existing mobile platform.
